

ABSTRACT

A blind trimming apparatus includes a frame defining a cutting recess, a cutting tool supported by the frame and extending into the cutting recess, and a cutting blade supported by the frame and moveable across the cutting tool during trimming. One of the cutting blade and the cutting tool includes a locating protrusion and the other of the cutting blade and the cutting tool defines a locating recess. The locating protrusion is engageable in the locating recess to index one of the cutting blade and the cutting tool with respect to the other of the cutting blade and the cutting tool.
